# Landmark Occasion Visualizer

- **Visual, easy to use** Platform for accessing data and analysis from the Landmark Study
- **Flexibility** to explore the data in depth through a **variety of modules**
- **Dashboards, Reporting & analytical modules** to meet the needs of various Kellogg's users
- **SSO Integration** for security and **User Access controls** to limit what modules different users can access

# Landmark Occasion Visualizer

The different modules in the Visualizer

## Occasion Profile

Visual Snapshot of key metrics at a glance

## Visual Cross Tab

Visual Cross Tab module allows users to slice and dice the data using tables and variety of charts

## Report Generator

Users can automatically generate a set of slides as a PowerPoint report from a pre-loaded template

## My Dashboard

Users can create and share their own dashboards by saving different widgets from any module

## Advanced Analytics

**Swim Lanes** allows users to identify key opportunity areas for specific segments of the data

**Correspondence Maps** help users analyse the relationship between Occasions and other variables

These are your needs that are addressed in each module

- Occasions-based dashboards & occasion framework visualization
- Custom inquiry for brand, category, occasion & identification of behavioural change
- Multi-dimensional analysis environment based on the Occasion record set
- Report Builder
- Custom stories that can be created and shared by an user
- Opportunity identification based on specific user needs

- Charts

# Visual Cross Tab Module

- **Help answer key business question** by allowing user to **slice and dice** data in any format.
- The dashboard concentrates on **OCCASIONS**. Data will always be viewed in the lens of Occasions.
- All the data cuts and filters are available in the dashboard, giving the user flexibility to choose across any attributes

Occasion Segments	Markets	Time Period	5Ws	Categories / Items / Brands	Demographics
All 14 occasion segments like	6 markets :	Quarter	When	Categories	Gender
Early Morning Bite	USA	YTD	Where	Items	Age
Breakfast For One	Mexico	Rolling 4 Quarter	Why	Brands	Ethnicity
Family Breakfast	Brazil	Annual	Who With		Income
Mid Morning Snack	UK		What		Household Size
.....	France		Purchase		Residence Location
	Australia		Activities		Shopping Involvement
	There are option to choose at an aggregate level like Europe (UK and FRANCE) or All Markets		Shopper Mission		Marital Status
					Education
					Employment Status

# Visual Cross Tab Module

- **Generate Insights** by pulling data in a format which will highlight patterns and differences. Few examples of business questions that can be answered.

Which categories have the highest occasion share across markets ?

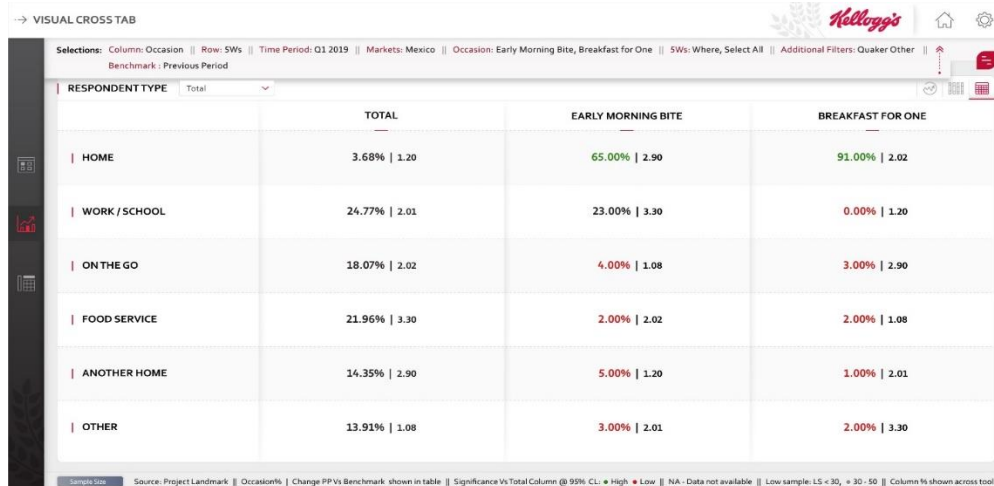

How have different occasion segments performed over the year in a market ?

Which demographic cohorts are consuming more in an occasion segment ?

Which Channels and Retailers are performing better for a brand ?

What are the key activities in an occasion segment and how is it differing across different age groups ?

- **The module is developed** in a way which helps user make the selections intuitively and the output helps user make instant inferences. The output also enables user to view the performance change from previous time period and check whether a particular attribute is significantly doing better than the rest.

# Visual Cross Tab Module – Selection Flow

## Step 1 : Determine the Table Structure

The first step is to determine the table structure.  
Since, the table output is always as Column%, hence, user should always choose what they want to compare and choose as Base in Columns

## Step 2 : Determine the Content of the Table

The second step is to determine the table content.  
This part of the selection will determine the content of the table. User needs to select the exact content which will fit in the structure created in Step 1

## Step 3 : Select the Benchmark against which change numbers would be shown

The third step is to determine the against which the change numbers need to be calculated. The calculation can be either against Previous Period or Previous Year

# Visual Cross Tab Module – How to read Table Output

→ VISUAL CROSSTAB

Selections: COLUMN: Occasion || ROW: 5Ws || TIME PERIOD: Quarter: Q1 2019 || MARKETS: Latin America: Mexico || OCCASION: Early Morning Bite, Breakfast For One, Family Breakfast, Breakfast at Work/School, Mid Morning Snack, ...

RESPONDENT TYPE: Total Submit

	TOTAL	EARLY MORNING BITE	BREAKFAST FOR ONE	FAMILY BREAKFAST	BREAKFAST AT WORK/SCHOOL
MEAL TIME	33.57%	26.90%	39.26%	31.90%	39.53%
PLEASURE	34.45%		23.10%	24.36%	23.42%
SOCIAL	17.84%		LS	24.58%	LS
CONVENIENCE	35.06%		45.42%	35.54%	43.42%
NOURISHMENT	38.42%	41.99%	45.83%	47.01%	46.48%
GRAZING	5.82%	LS			LS

Values will always be calculated as column %

Example : 26.9% of Early Morning Bite occasions is for Meal Time Motivation

Significance is always done against the corresponding value in the Total Column.

Example : Share of Nourishment occasions in Breakfast for One is significantly higher than Share of Nourishment occasions across the occasion segments (Refer to Total Column)

Sample Size Source: Project Landmark || Occasion % | Change PP Vs Benchmark shown in table || Significance Vs Total Column @ 95% || 30-50 || Column % shown across tool

The first three selections will determine the structure of the cross-tab. The user will just select what will come in Columns, Rows and Row Nesting.  
In case of Row Nesting, each row will become parent to the nested rows

These set of selections will determine the contents of the tables. The selections made in the 'Table Structure' section will determine the attributes which will be available for selection  
Depending on the selections on the Table Structure, the attributes will be enabled/ disabled

- Selection Flow
- How to read the numbers in the output area
- One example of Cross Tab module selection and output
- Key Features
- Charts

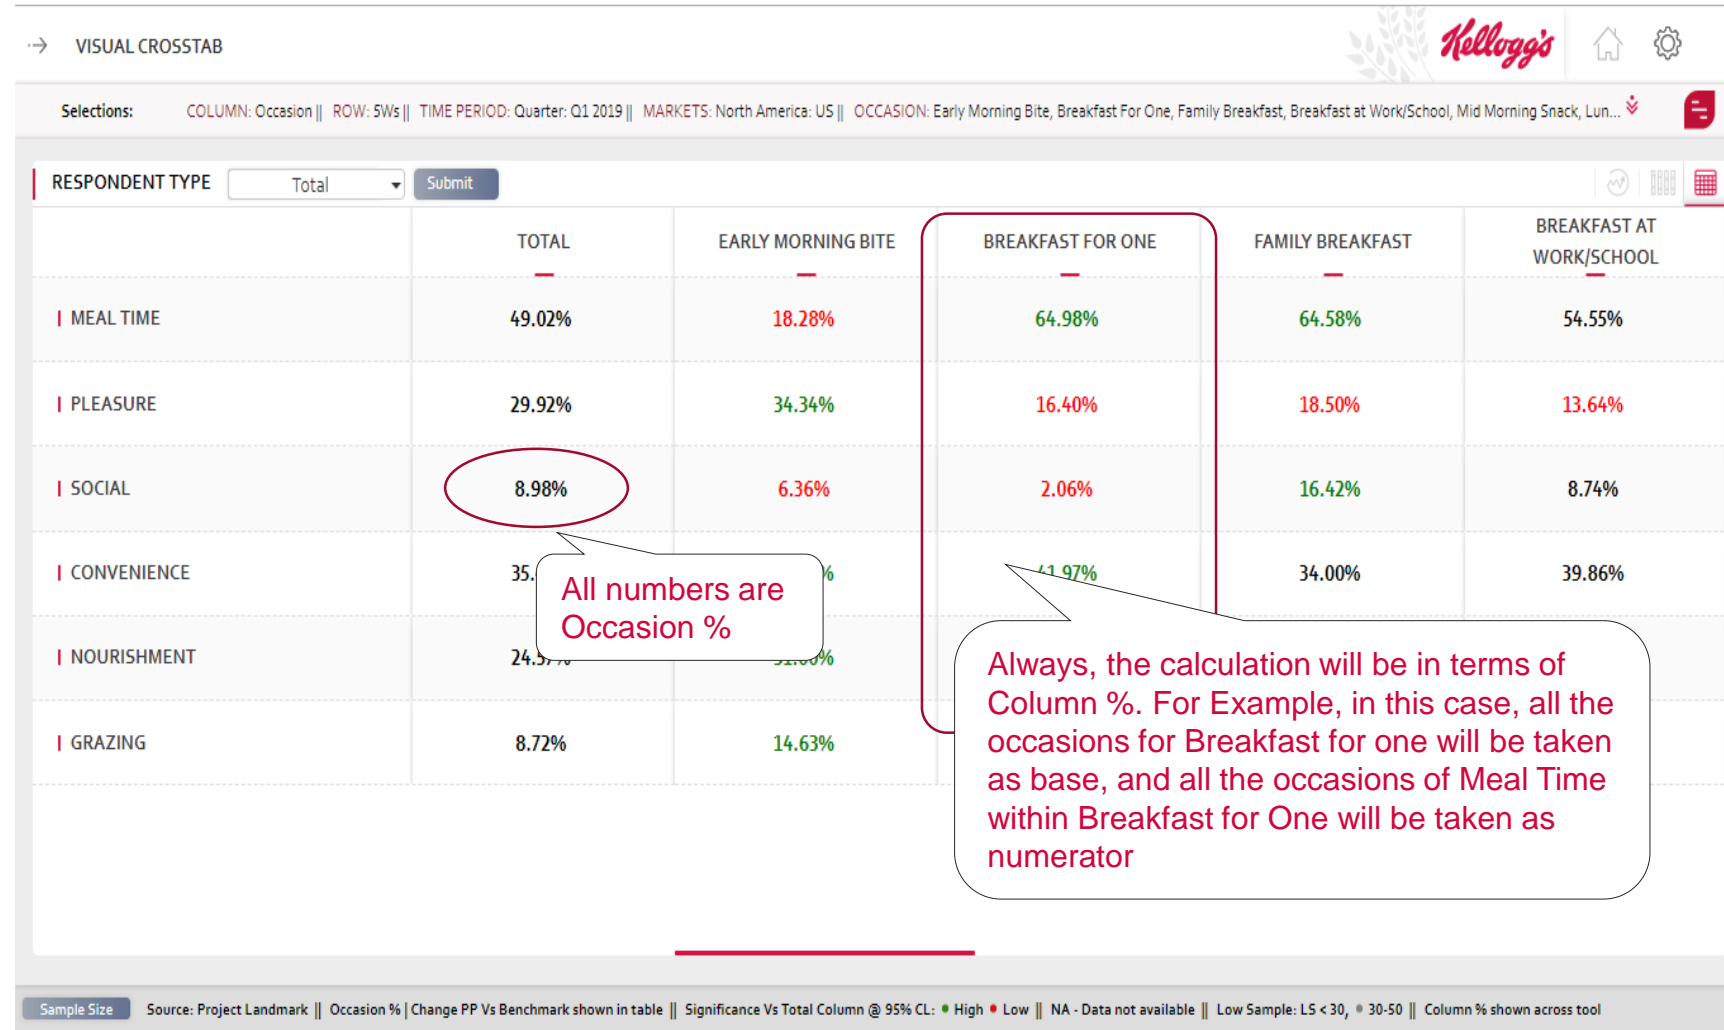

# Visual Cross Tab Module – Key Features

This module allows users to slice and dice data and visualize the data in Table and Chart format (wherever applicable).

The table will always show data in form of **COLUMN %**.

Table will **ONLY** show **OCCASION %**.

# Visual Cross Tab Module – Key Features

**One level** of row nesting is allowed in this module. The parent row will become the base for the nested row

→ VISUAL CROSTAB

Selections: COLUMN: Occasion || ROW: SWs || ROW NESTING: Demographics || TIME PERIOD: Quarter: Q1 2019 || MARKETS: North America: US || OCCASION: Early Morning Bite, Breakfast For One, Family Breakfast, Breakfast at Wor...

RESPONDENT TYPE: Total Submit

	TOTAL	EARLY MORNING BITE	BREAKFAST FOR ONE	FAMILY BREAKFAST	BREAKFAST AT WORK/SCHOOL
MEAL TIME	48.58%	18.69%	66.27%	66.10%	56.83%
MALE	50.10%	50.43%	52.72%	47.08%	46.63%
FEMALE	49.90%	49.57%	47.28%	52.92%	53.37%
PLEASURE	28.96%	32.47%	14.57%	15.44%	43.67%
MALE	51.41%	55.58%	60.04%	57.50%	47.50%
FEMALE	48.59%	44.42%	39.96%	42.50%	48.50%
SOCIAL	9.29%	5.48%	1.67%	15.56%	15.56%
MALE	48.15%	60.29%	64.91%	50.12%	48.15%

Sample Size Source: Project Landmark || Occasion % | Change PP Vs Benchmark shown in table || Significance Vs Total Column @ 95% CL: ● High ● Low || NA - Data not available || Low Sample: LS < 30, ● 30-50 || Column % shown across tool

There is one level of Row Nesting which is allowed in the tool. Each parent row will be considered the base for the nested row.

For example, For Males within Early Morning Bite, the base will be occasions of Early Morning Bite – Meal Time and the numerator will be the occasions of Male – Early Morning Bite – Meal Time

# Visual Cross Tab Module – Key Features

Time Periods and Markets can **ONLY** come in **Columns**. Since, the tool is calculating column %, hence Time Period and Market in rows was not making intuitive sense.

→ VISUAL CROSTAB
